

Strategy Info

Our proprietary forecasting system processes a comprehensive set of relevant data concerning economic, sentiment, and technical developments with the help of artificial intelligence (machine learning). The resulting 328 forecasts on 41 markets seek to anticipate the investment decisions of other market participants over multiple time horizons. Our portfolio management process allocates the capital on a risk parity basis, first on an asset class level, second within the asset class to each of the forecasts. All positions are adjusted daily to the conviction of the forecasts. The broad diversification manages to reduce the volatility of the portfolio to significantly below the level of a comparable 100% long-only equity investment while providing similar or better return expectations.

Fund Particulars

Style	Global systematic macro
Strategy Launch	December 1 2015
AUM	USD 50M as of November 01 2021
Subscription	Monthly, last business day
Redemption	Monthly, 3 business days notice

Monthly Market Commentary

October was another challenging month for our strategy as it struggled to account for the unusual pattern of rates, equities, and commodities going up at the same time leading to a loss of 3.8% and bringing our drawdown since August to 9%. Only 27% of our forecasts were positive. YTD our performance stands at -1.7%. Patterns of this nature where our forecasts struggle for several months until they rebound do occur every three to four years in our forecast history but are certainly testing our collective patience.

Glossary

Since Inception	Refers to 01 December 2015
Performance Figures	All performance figures are based on the returns of the A-Share Class in USD.
Risk Figures	All risk figures (except VaR, see below) are based on monthly returns. The Sharpe ratios assume a risk-free rate equal to the 3-month US Bill rate.
Reference Assets	Indices used for correlation and performance figures (Bloomberg tickers): Hedge Fund Index (HFRXGL Index), MSCI World Index (M1WO Index), S&P 500 Index (SPXT Index), Government Bond Index (LBSTRUU Index), Credit Index (LGDTRUU Index), Risk Parity Index (SPRP10T Index), Commodity Index (SPGSCI Index)
Asset Class "Others"	Includes the VIX volatility index
Value at Risk	VaR corresponds to the 1-month VaR at 95% confidence level. Reporting a VaR of -3% means that there is a 5% chance that the return for the next month will be -3% or worse. The VaR values shown are average values over the last month and last 12 months. The correlations and volatilities used are based on weekly data, rolling over 12 years.
Correlation	The chart shows the correlation based on weekly returns, calculated since inception of the fund.
Exposure	The average absolute exposure shows the average of the daily absolute exposure of the respective month. The exposure breakdown shows the long and short exposure per asset class. For FX

DISCLAIMER The Tom Capital Growth Fund is in the category of "other funds for alternative investments" under Swiss law. It carries special risks and implements its investment strategy through derivative financial instruments as described in section 1.2 of the fund prospectus and §8 of the fund contract (use of equity-, bond- and currency derivatives based on an allocation process defined in the fund prospectus with integrated fund contract). Based on the instruments and the investment techniques used, the risks of the Tom Capital Growth Fund are not comparable to those of a conventional securities fund. In particular, the gross exposure of the investments may reach up to 585% (including credit) of the net asset value. Investors attention is explicitly drawn to the risk information described in the fund prospectus. Under extraordinary circumstances, investors in the fund need to be capable to suffer the total loss of capital. This document serves for information and marketing purposes only and does not qualify as investment advice or offering. No liability is assumed for the accuracy and completeness of the information. Opinions and assessments contained in this document may change and reflect the point of view of Tom Capital in the current economic environment. Investments should only be made after a thorough reading of the current prospectus and/or the fund regulations, the current annual and semi-annual reports (the "legal documents"), as well as after consulting an independent finance and tax specialist. The performance of past values and returns is no indicator of their current or future development. The performance of values and returns does not include the fees and costs which may be charged when buying, selling and/or switching units.
