

Strategy Info

Our proprietary forecasting system processes a comprehensive set of relevant public data concerning economic, sentiment and technical developments. The resulting forecasts anticipate the investment decisions of other market participants. Based on our forecasts, the trading system is able to extract value from mid-term trends and the underlying short-term volatility. This allows it to benefit from both trending and sideways markets. The long/short portfolio construction diversifies risk over four liquid asset classes and multiple markets on an equal risk basis, effectively lowering portfolio volatility on average below a 100% equity investment.

Fund Particulars

Style	Global systematic macro
Strategy Launch	December 1 2015
AUM	USD 45M as of January 01 2020
Subscription	Monthly, last business day
Redemption	Monthly, 3 business days notice

Monthly Market Commentary

December resulted again in a gain of more than 1.5 percent for the fund primarily thanks to the continued rally in the Australian equity market and the accompanying drop in Australian bonds which our forecasts had correctly anticipated. All other markets contributed positively except the Australian Dollar. As in previous years, we closed all positions ahead of and over New Year. The lower trading volumes and year-end window dressings that take place normally do not contribute to our approach. We started into 2020 with a positive outlook on equities and the dollar and a negative outlook on bonds. We have some exciting updates on our portfolio management and would like to refer you for more details to our annual update.

Glossary

Since Inception	Refers to 01 December 2015
Performance Figures	All performance figures are based on the returns of the A-Share Class in USD.
Risk Figures	All risk figures (except VaR, see below) are based on monthly returns. The Sharpe ratios assume a risk-free rate equal to the 3-month US Bill rate.
Reference Assets	Indices used for correlation and performance figures (Bloomberg tickers): Hedge Fund Index (HFRXGL Index), MSCI World Index (M1WO Index), S&P 500 Index (SPXT Index), Government Bond Index (LBSTRUU Index), Credit Index (LGDTRUU Index), Risk Parity Index (SPRP10T Index), Commodity Index (SPGSCI Index)
Asset Class "Others"	Includes the VIX volatility index
Value at Risk	VaR corresponds to the 1-month VaR at 95% confidence level. Reporting a VaR of -3% means that there is a 5% chance that the return for the next month will be -3% or worse. The VaR values shown are average values over the last month and last 12 months. The correlations and volatilities used are based on weekly data, rolling over 12 years.
Correlation	The chart shows the correlation based on weekly returns, calculated since inception of the fund.
Exposure	The average absolute exposure shows the average of the daily absolute exposure of the respective month. The exposure breakdown shows the long and short exposure per asset class. For FX

DISCLAIMER The Tom Capital Growth Fund is in the category of "other funds for alternative investments" under Swiss law. It carries special risks and implements its investment strategy through derivative financial instruments as described in 1.2 of the fund prospectus and §8 of the fund contract (use of equity-, bond- and currency derivatives based on an allocation process defined in the fund prospectus with integrated fund contract). Based on the instruments and the investment techniques used, the risks of the Tom Capital Growth Fund are not comparable to those of a conventional securities fund. In particular, the gross exposure of the investments may reach up to 585% (including credit) of the net asset value. Investors attention is explicitly drawn to the risk information described in the fund prospectus. Under extraordinary circumstances, investors in the fund need to be capable to suffer the total loss of capital. The information in this document is given for information purposes only and does not qualify as investment advice. No liability is assumed for the accuracy and completeness of the information. Opinions and assessments contained in this document may change and reflect the point of view of Tom Capital in the current economic environment. This document qualifies as marketing material. Investments should only be made after a thorough reading of the current prospectus and/or the fund regulations, the current annual and semi-annual reports (the "legal documents"), as well as after consulting an independent finance and tax specialist. The performance of past values and returns is no indicator of their current or future development. The performance of values and returns does not include the fees and costs which may be charged when buying, selling and/or switching units. Note that a new legal form of the investment strategy has taken place as of 1 December 2015 (inception of TCGF) and the track record from 23 February 2012 to 30 November 2015 relates to the Tom Capital account. Tom Capital claims compliance with the Global Investment Performance Standards (GIPS®) for the composite return.
